"P-domains as shuffled cysteine-rich modules in integumentary mucin c.i [FIM-C.1) from Xenopus laevis. Polydispersity and genetic polymorphism.";
J. Biol. Chem. 267:24620-24624(1992).
-!- FUNCTION: Could be involved in defense against microbial infections. Protects the epithelia from external environment.
-!- SUBCELDULAR LOCATION: Secreted.
-!- ALFERNATIVE PRODUCTS:
                                                                                                                                                             /FTIG=VAR 001404.
Missing (in heptcocellular carcinomas)
/FTIG=VAR 001405.
Missing (in a bladder cancer).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       01-0CT-1994 (Rel. 30, Created)

-!- TISSUE SPECIFICITY: Expressed in the heart, brain, lung, skeletal muscle, kidney, pancreas and testis. High levels are seen in the placenta while low levels are seen in the liver.
-!- DISEASE: Defects in CDKNIC are involved in tumor formation.
-!- SIMILARITY: Belongs to the CDI family.
                                                                                                                                                                                                                                             SEQUENCE FROM N.A.

In Sext. Expressed in fetal brain (in neurons of hippocampus,
cortex, mediodorsal and ventrolateral thalamic nuclei, putamen,
cerebellum and brainstem).
DEVENCEMENTAL STAGS: In fetal brain of the 24th gestational week.
SIMILARITY: BELONGS TO THE SAL FAMILY OF C242-TYPE ZINC-FINGER
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isold=Q9BXA9-2; Sequence=VSP 006833;

-!- FUNCTION: Adaptins are components of the adaptor complexes which link clathrin to receptors in coated vesicles. Clathrin-associated protein complexes are believed to interact with the cytoplasmic tails of membrane proteins, leading to their selection and concentration. Binding of AP180 to clathrin triskelia induces their assembly into 60-70 nM coats.
-!- SUBCELLULAR LOCATION: Component of the coat surrounding the cytoplasmic face of coated vesicles in the plasma membrane.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9 APISVP-APVAAATTAATITATAATITTTWVAAAPVAV----AAAAAAAAAAAPS----

Isodia-60548-2; Sequence=VSP 000172;
Isodia-605548-2; Sequence=VSP 000172;
ISSUS SPECIFICITY: Brain. Associated with the synapses.
-!- DEVELOPMENTAL STRABS: Developmentally regulated in a pattern coincident with active synaptogenesis and synaptic maturation.
-!- DOMAIN: Possesses a three domain structure: the N-terminal 300 residues harbor a clathrin binding site, an acidic middle domain 450 residues, interrupted by an Ala-rich segment, and the C-terminal domain (166 residues).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Clathrin-associated protein complexes are believed to interact with the cytoplasmic tails of membrane proteins, leading to their selection and concentration. Blunding of AP180 to clathrin triskelia induces their assembly into 60-70 nM coats.

"Complete genome sequence and comparative analysis of the industrial microorganism Erreptomyces avermitilis.";

Nat. Biotechnol. 21:526-531(2003).

-! FUNCTION: One of the essential components for the initiation of protein synthesis. Protects formylmethionyl-tRNA from spontaneous hydrolysis and promotes its binding to the 30s ribosomal subunits. Also involved in the hydrolysis of GTP during the formation of the 70s ribosomal complex (By similarity).

-! SUBCELLULAR LOCATION: Cytoplasmic.
-! SUBCELLULAR LOCATION: Cytoplasmic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SEQUENCE FROM N.A.

SOFTWARE: Microsoft Office 97
SOFTWARE: Microsoft Office 97
CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/434,256
FILING DATE:
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: Bohenschutz, Liza D.
REGISTRATION NUMBER: 33,712
REFERENCE/DOCKET NUMBER: 33,712
REFERENCE/DOCKET NUMBER: 1MPH-0003
TELECHMONICATION INFORMATION:
TELEPHONE: (215)568-3949
INFORMATION FOR SEQ ID NO: 2: SEQUENCE CHARACTERISTICS:
LENGTH: 308 amino acids
TYPE: amino acids
TYPE: amino acids
TYPE: amino acids
TYPE: amino acid
TOPOLOGY: linear
NOLECULE TYPE: protein

A;Title: Conservation of antifreeze protein-encoding genes in tandem repeats.
A;Réference number: JH0627; MUID:92209995; PMID:1555765
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A, Molecule type: mRNA
A, Residues: 1-82 < DA2>
A, Residues: 1-82 < DA2>
A, Experimental Source: clones 4-2b and 2A-7c
A, Note: the authors translated the codon AGC for residue 24 as Arg
C, Genetics:
A, Introns: 19/2
C, Superfamily: antifreeze protein
C, Keywords: antifreeze; plasma, tandem repeat
C, Keywords: antifreeze; plasma, tandem repeat
F, 1-21/Domain: propeptide #status predicted <SIG>
F, 22-44/Domain: propeptide #status predicted < PRO>
F, 45-B2/Product: antifreeze protein A #status predicted < MAT>

acidic ribosomal protein P2 - slime mold (Dictyostelium discoideum)

NyAlternate names: ribosomal phosphoprotein P2
C;Species: Dictyostellum discoideum
C;Date: 31-Dec-1992 #sequence_revision 31-Dec-1992 #text_change 22-Jun-1999
C;Accession: S14014
R;Priect, J; Candel, E; Coloma, A.
Nucleic Acids Res. 19, 1141, 1391
A;Title: Nucleotide sequence of a cDNA encoding acidic ribosomal phosphoprotein P2 in Di A;Reference number: S14014; MUID:9123921; PMID:1840653
A;Accession: S14014
A;Status: nucleic acid sequence not shown; translation not shown
A;Molecule type: mRNA
A;Residues: 1-106 <PRI: A;Accession: S14014
A;Coss-references: EMBL:X56192; NID:G7340; PIDN:CAA39655.1; PID:G7341
A;Accession: uncleotide sequence was submitted to the EMBL Data Library, November 1990
A;Note: the nucleotide sequence, including the amino end of the mature protein, was confir C;Superfamily: rat acidic ribosomal protein P2

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                      US-09-332-063-2

Listochemical and molecular characterization of the Alcaligenes eutrophus pyruvate dehydrogenase complex and identification of a new type of dihydrolipoamide dehydrogenase.";

J. Bacteriol. 176:4394-4408 (1994).

-i- FUNCTION: The pyruvate dehydrogenase complex catalyzes the overall conversion of pyruvate dehydrogenase complex catalyzes the overall multiple copies of three enzymatic components: pyruvate dehydrogenase (E1), dihydrolipoamide acetyltransferase (E2) and lipoamide dehydrogenase (E3).

-i- CATALYTIC ACTIVITY: Acetyl-CoA + dihydrolipoamide = COA + S-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -!- SUBUNIT: Forms a 24-polypeptide structural core with octahedral

Thou K.-C.;
Energy-optimized structure of antifreeze protein and its binding
                                                                                                                                                                                                                                                                                                                                                                                                  Nature 375:427-431(1995).
-!- FUNCTION: Antifreeze proteins lower the blood freezing point.
-!- MISCELANBOUS: The sequence shown is that of protein A.
-!- SIMILARITY: BELONGS TO THE TYPE-I APP PAMILY. TYPE I APP ARE
ALANINE-RICH, AMPHIPHILIC AND ALPHA-HELICAL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 REMOVED BY A DIPEPTIDYLPEPTIDASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-NOV-1988 (Rel. 09, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Biochim. Biophys. Acta 626:162-169(1980).
-!- FUNCTION: Seems to be the binding site for several of the factors involved in protein synthesis and appears to be essential for accurate translation [By similarity].
-!- SIMILARITY: Belongs to the L12P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Linhart A., Piendi W.,
Submitted (JAN.1998) to the EMBL/GenBank/DDBJ database8.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    protein synthesis.
-!- SUBUNIT: P1 and P2 exist as dimers at the large ribosomal subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

    -!- PTM: Phosphorylated.
    -!- SIMILARITY: Belongs to the L12P family of ribosomal proteins.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

Thenome sequence and analysis of the oral bacterium Fusobacterium

nucleatum strain ATCC 25586 "",

J. Bacteriol. 184:2005-2018 (202).

-!-FUNGTON: Seems to be the binding site for several of the factors involved in protein synthesis and appears to be essential for accurate translation (By similarity).

-!- SIMILARITY: Belongs to the Li2P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score 10; DB 1; Length 122;

MICROPIOLOGY 143:55-61(1997).

-!- FUNCTION: Seems to be the binding site for several of the factors incolved in protein synthesis and appears to be essential for accurate translation (By similarity).

-!- SIMILARITY: Belongs to the L12P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

-!- FUNCTION: Seems to be the binding site for several of the factors involved in protein synthesis and appears to be essential for accurate translation (By similarity).
-!- SIMILARITY: Belongs to the L12P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Kaneko T., Nakamura Y., Sato S., Asamizu E., Kato T., Sasamoto S., Watanabe A., Idesawa K., Ishikawa A., Kawashina K., Kimura T., Kishida Y., Kishida Y., Kiyokawa C., Kohara M., Matsumoto M., Matsumo A., Mochizuki Y., Nakayama S., Nakazaki N., Shimpo S., Sugimoto M., Takeuchi C., Yamada M., Tabata S.; "Complete genome structure of the nitrogen-fixing symbiotic bacterium Mesorhizobium loti.";

The protein is designated ABP-1, and binds the first 4 kringle domains (K1-K4) and/or kringle 5 (K5) of plasminogen. These four kringle domains comprise angiostatin. The protein acts as a receptor for plasminogen. The angiostatin-binding domain of the ABP-1 protein is described in AAY54054. A polymorphic variant of ABP-1 is also described, in AAY54053. ABP-1 can

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a polymorphic variant of a human angiogenesis-associated protein which is able to bind an N-terminal fragment of plasminogen. The native protein, described in AMYS4052, is designated ABP-1, and binds the first 4 kringle domains (X1-K4) and/or kringle 5 (K5) of plasminogen. These four kringle domains comprise angiostatin. The ABP-1 protein acts as a receptor for plasminogen. The angiostatin-binding domain of the ABP-1 protein is described in AAX54054. ABP-1 can be used to manufacture medicaments for treating angiogenesis-related diseases or disorders, such as turnor conditions, diabetes, rheumatoid arthritis, and even some inflammatory diseases such as portein any also be able to treat and cure, or prevent, obesity. The ABP-1 protein may also be able to treat and cure, or prevent, obesity. The ABP-1 protein may also be able to treat and cure, or prevent, obesity. The ABP-1 protein may also be able to treat and cure, or prevent, obesity. The ABP-1 protein may also also as a protein and cure, or prevent, obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            210

```

The present invention relates to novel cell growth, differentiation and death (CGDD) proteins and polymucleotides encoding them. The sequences of the invention are useful in diagnosing, preventing and treating disorders associated with an abnormal expression or activity of CGDD such as neurodegenerative disorders (e.g. Parkinson's disease, Alzheimer's disease), meacular disorders (e.g. quiabetes; Grave's disease), Alzheimer's endocrine disorders (e.g. diabetes; Grave's disease), caractronia), endocrine gisorders (e.g. diabetes; Grave's disease), gastrofinestinal scleorderma, eystemic lugus arythematosus, allerques), gastrofinestinal disorders (e.g. Goodpasture's syndrome), infections (e.g. viral) bacterial, fungal, parasitic, protozoal, helminthic), cardiovascular disorders (e.g. atherosclerosis) cand hepatic diseases (e.g. cirrhosis). The polymucleotides can be used to create humanised animals or transgenic animals to model human diseases.

                                                                                                                                                                                                                                                                                                                                                The invention relates to 446 newly isolated polynucleotide sequences. The activity of polynucleotides of the invention may be described as, vulnerary, neuroprotective, immunomodulator, cytostatic and antiniflammatory. Compositions comprising nucleic acids of the invention are useful for treating a mammalian subject, or as nutritional sources or supplements. These are useful in gene therapy, particularly for treating wounds, burns or ulcars, Alzheimer's disease, Muntington's disease, amyotrophic lateral sclerosis, autoimmune disorders, cancer or inflammation. The nucleic acids and polypeptides are also useful in diagnostic and research methods. The sequences given in records ABB4354-ABB4399 represent polypeptides encoded by polynucleotides of the invention. WOTEs The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/published_pct_sequences

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cand in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating supplement. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders or polypeptide and polymucleotide sequences have applications in dispositics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess bliodiversity responsible for genetic disorders or other traits to assess bliodiversity responsible for genetic disorders or other traits to assess bliodiversity and to produce other types of data and products dependent on DNA and anno acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in the printed sequences.

Sequence 143 AA;

X X

```
The present sequence represents the angiostatin-binding domain, designated Big-3, of a human angiogenesis-associated protein. The protein binds an N-terminal fragment of plasminogen. The ABP-1 protein is designated ABP-1, and binds the first 4 kringle domains (KI-K4) and/or kringle 5 (K5) of plasminogen. These four kringle domains comprise angiostatin. The ABP-1 protein acts as a receptor for plasminogen. A polymorphic variant of ABP-1 is also described, in AAY54083. ABP-1 can be used to manufacture medicaments for treating angiogenesis-related diseases or disorders, such as tumor conditions, diabetes, rheumatoid arthritis, and even some inflammatory diseases such as psoriasis, chronic inflammation of the intestine, asthma, etc. The protein may also be able to treat and cure, or prevent, obesity. The ABP-1 DNA can be used in gene therapy techniques

The present sequence is a peptide encoded by one such probe. The SENPs are derived from human Hela calls. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foctal liver. The single exor nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 genome-derived single exon nucleic acid probes useful for analyzing expression in human fetal liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; microarray; single exon probe; gene expression; breast; disease;
Peptide #3271 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         154 MPRAQPSSASYQPVPADPPAIVSRAQQMVBILSDENRNIRQBLBGCYEKVARIQK 208

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and Br 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Protein #3157 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0; Gaps

The present invention relates to single exon mucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA13135). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                      Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and cayeloma. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia,
                                                                                Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human, brain expressed exon, gene expression analysis; probe, microarray;
Alzheimer's disease, multiple sclerosis; schizophrenia, epilepsy, cancer.

The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperilepidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG5930 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human adult liver.

The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Probe, human, breast disease, breast cancer, development disorder, inflammatory disease, proliferative breast disease, non-carcinoma tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel single exon nucleic acid probe used to measuring gene expression in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
